Preflight Training Certificates from www.prepresstraining.com

FREELANCE
Webmaster for goodshirtscheap.com, hardwiredmedia.com, hlscommunications.com, caseygovero.com

ABOUT ME

I've always had an interest in art, music, and computers. As a kid I remember copying disney cartoons to try to reproduce the characters. I found my way into graphic design in high school while trying to design logos. I remember a friend telling me I should try graphic design. After putting some thought into it, I realized I did indeed love drawing, painting, and coming up with graphical symbols.

In college, I realized the connection between music, art, and computers. Creating a visual and audio experience that related to art made a lot of sense to me. Creating graphics and motion graphics also led me to programming. I learned that with programming you can do much more with computers. I began designing websites to help myself learn programming. I felt it was the best way to learn programming and also include art. Over time it made me a much stronger designer and developer. It was also a great career that allowed me to do what I enjoy!
